

## **Fork Positioner for Forklift**

Forklift Fork Positioner - The fork positioner is a hydraulic apparatus which can allow the driver to operate the lift truck without leaving the seat. They are made out of high quality materials and are meant to withstand the most challenging operations and work surroundings. Side shifting units have the added ability to laterally position the entire load or the arms in order to facilitate more exact lifting and placement in a faster and much more effective method.

The fork pocket is quite unique and enables the person operating it to securely swing the blades into position without any fear of damaging the positioning cylinders. This can allow the operator the choice to be able to perform simultaneous or independent fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into blade positioners on available units.
