Furthermore, there are more than 90 independent sellers moving lift truck supplies and materials handling equipment. This system allows Doosan Infracore America to aggressively compete in this competitive market. The forklift product line remarkably includes 63 different machines consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion forklifts. Capacities of these numerous truck versions vary from 3,000 to 33,000 lbs. All vehicles are manufactured in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest growing forklift company in the North American market, due to their stability in maintaining a high level of customer service excellence and optimum product performance to all Doosan Infracore Lift Truck users. The U.S. lift Truck division located in Cleveland has a professional team knowledgeable in Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's original domestic lift truck market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled lift trucks as part of a national equipment expansion project. Early sales of this industrial equipment focused on large business groups, the armed services and on state-run firms. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical instruction grew to become the new focus for improving quality and product development.

Domestic lift truck business for Daewoo started in 1967 and grew to an amazing 90% market share in Korea. By the 1980's, Daewoo's sophisticated technological advancements combined with sales success placed them in a situation of considerable expansion of their lift truck operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint enterprise project to respond to competitive pressures in the US materials handling industry. This endeavor greatly expanded Daewoo's forklift sales. Construction was finished in 1984 to facilitate a contemporary plant which helped establish the company for the fabrication of high added-value goods suited for export. In 1993, the corporation had a global sales network and started exporting designs they had established through in-house expertise, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into international marketplaces.
